

# Shallow Gas in The Netherlands Derisked by Seismic Characterisation

Mijke van den Boogaard (EBN), Rutger Gras (ONE) & Guido Hoetz (EBN)

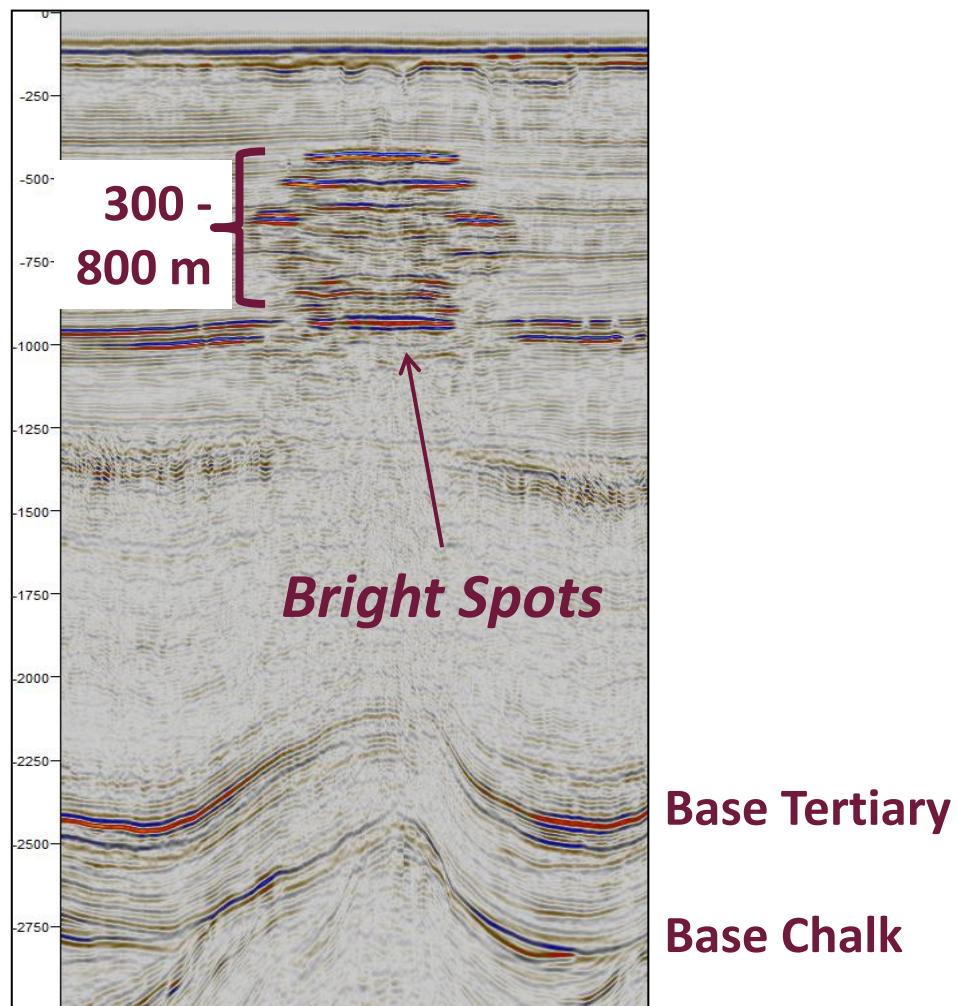

75th EAGE Conference & Exhibition 2013 London

1. Introduction
2. Workflow for screening play
3. Seismic characterization
4. Case study F12-Pliocene
5. Summary

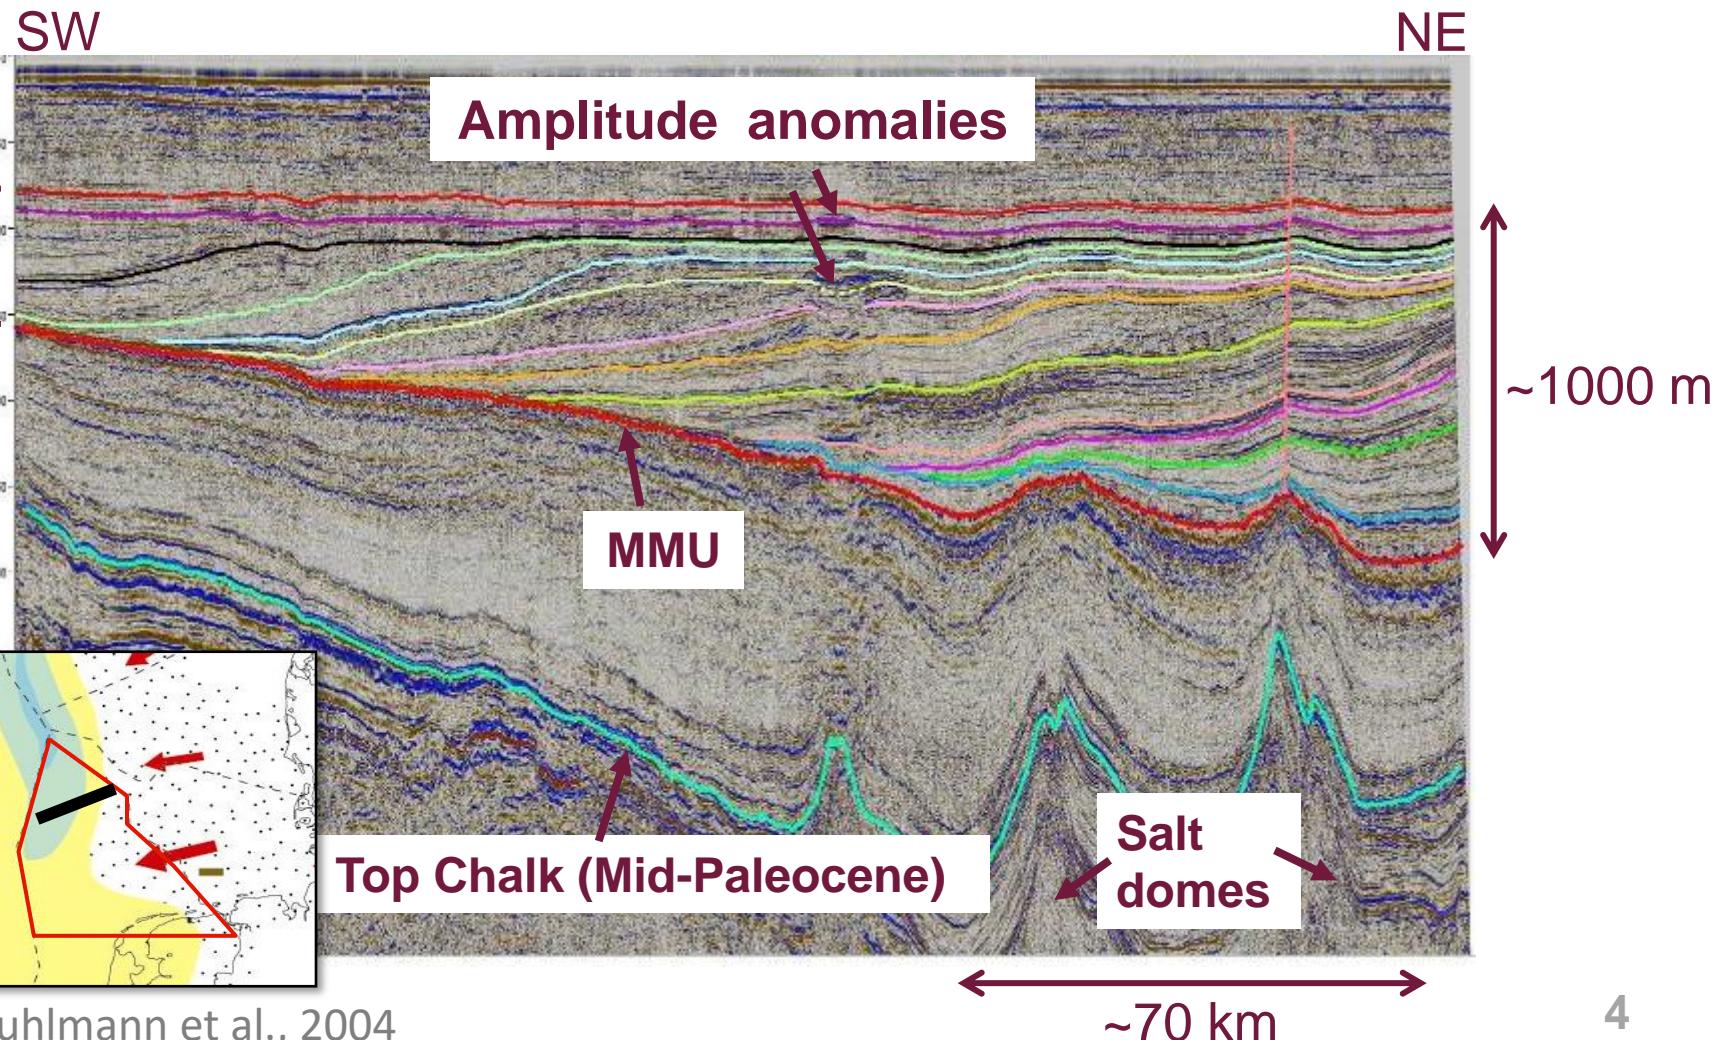

# Introduction - Geological Setting

Shallow Gas (**SG**) = gas in unconsolidated, Miocene-Pleistocene sands

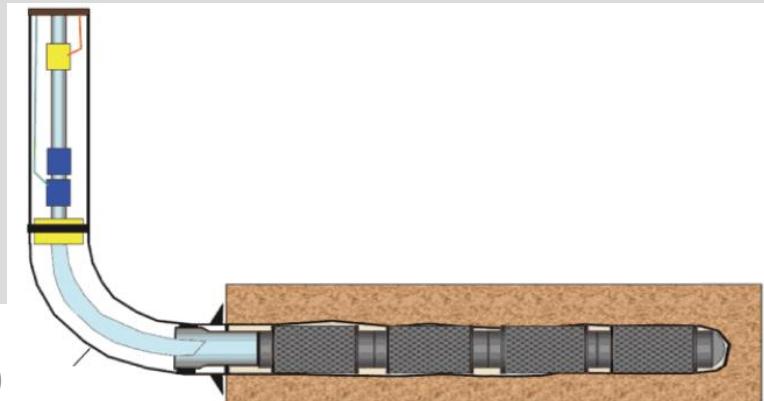

# Introduction - Geological Setting

# Introduction

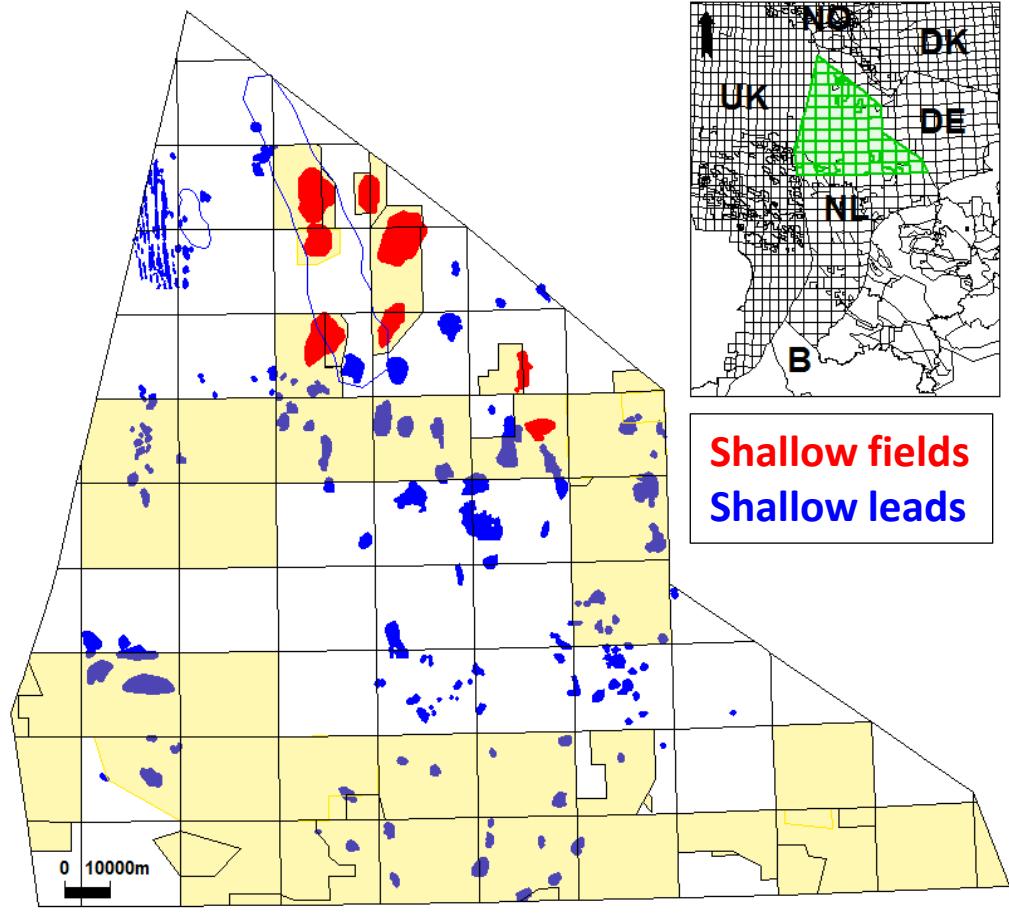

## Why Exploring for Shallow Gas now?

- Presence shallow gas known since 70's
- Early water breakthrough & sand production expected  
→ fields not developed
- Currently 3 successfully producing fields:
  - A12-FA (2007)
  - F02a-B-Pliocene (2009)
  - B13-FA (2011)
- Technical breakthrough  
(e.g. sand control in horizontal wells)

# Introduction

## Why Exploring for Shallow Gas now?

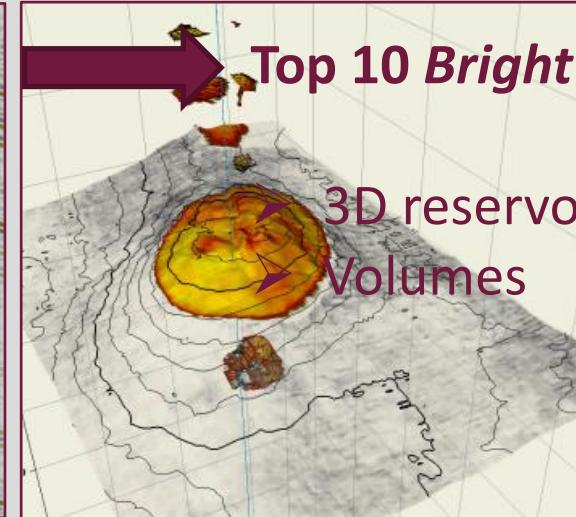

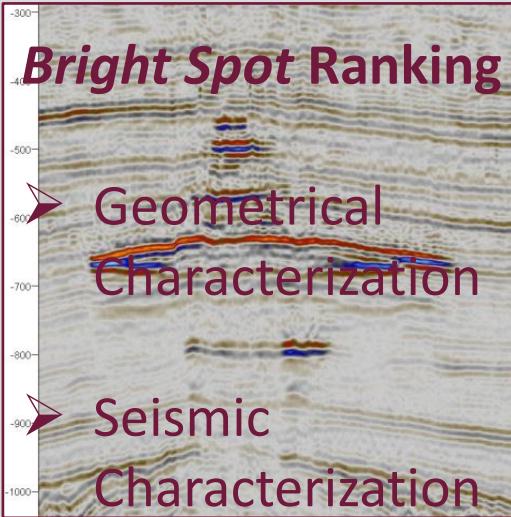

1. New technology proven successful for SG developments
2. 3D seismic points to more opportunities
3. Marginal field tax incentive applicable (2010)
4. Guaranteed gas off take

# Workflow for Screening Shallow Gas Play

SG Portfolio

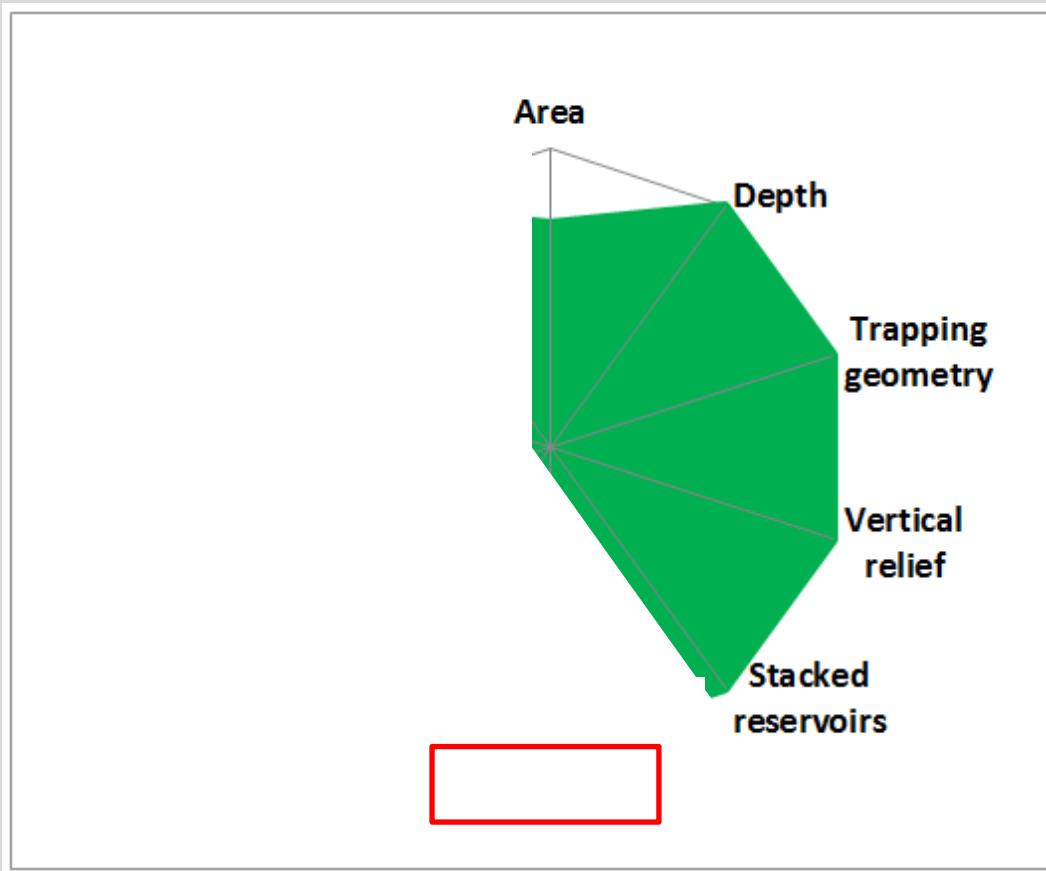

- *Bright Spots* identified (RMS ampl. scanning)
- 150 leads & prospects

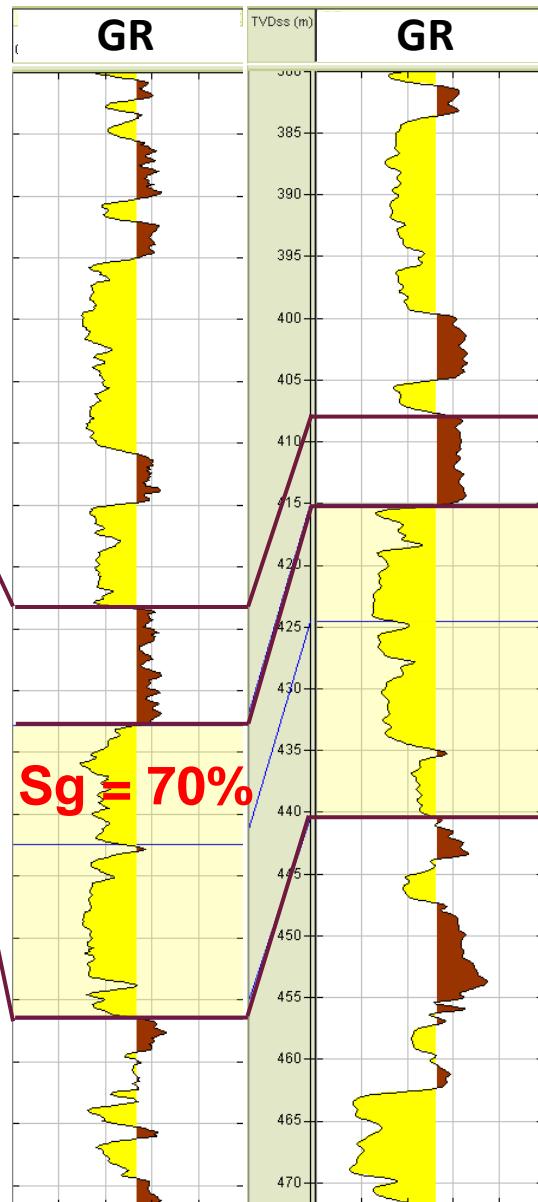

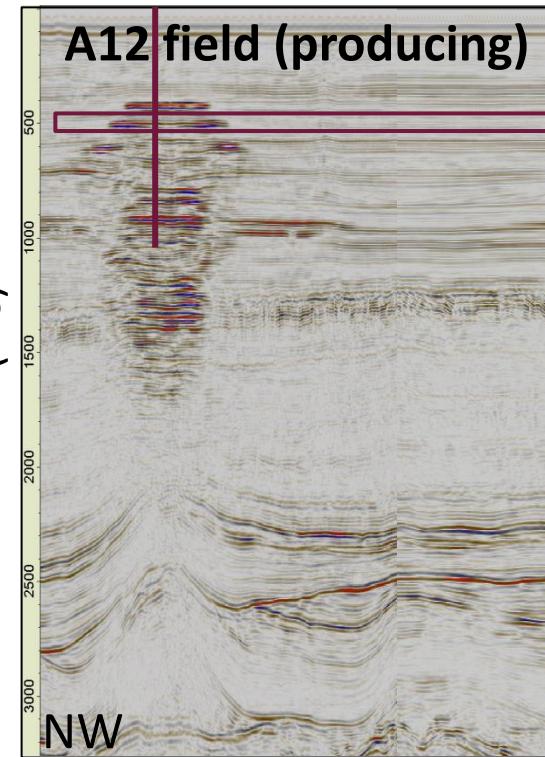

# Workflow for Screening Shallow Gas Play

## Seismic Characterization

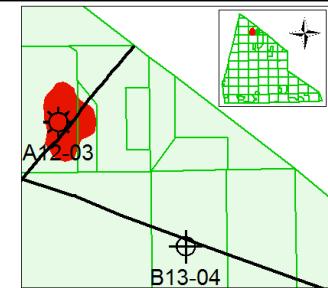

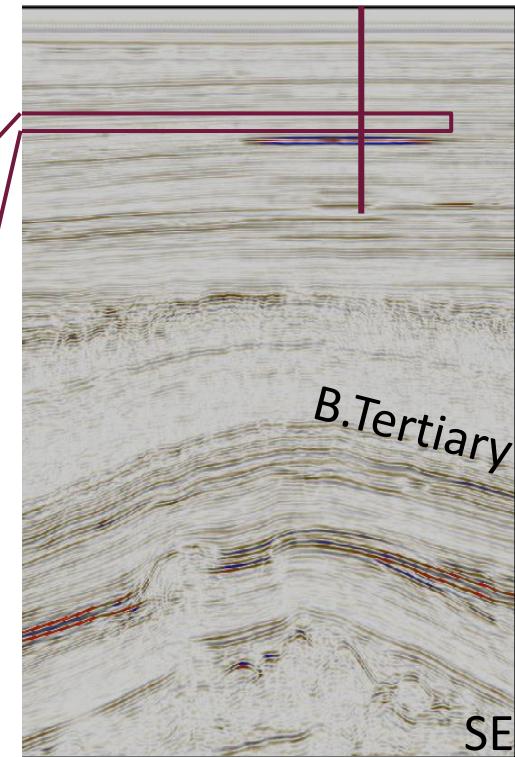

# Seismic Characterization Shallow Gas - Amplitude -

A12-03

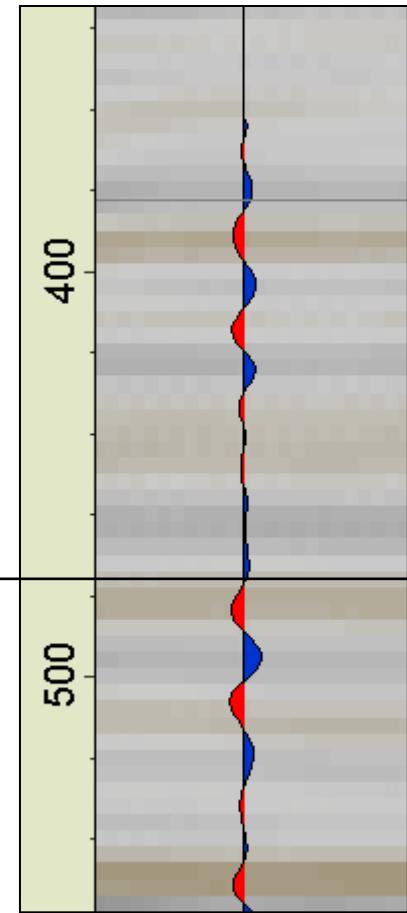

B13-04

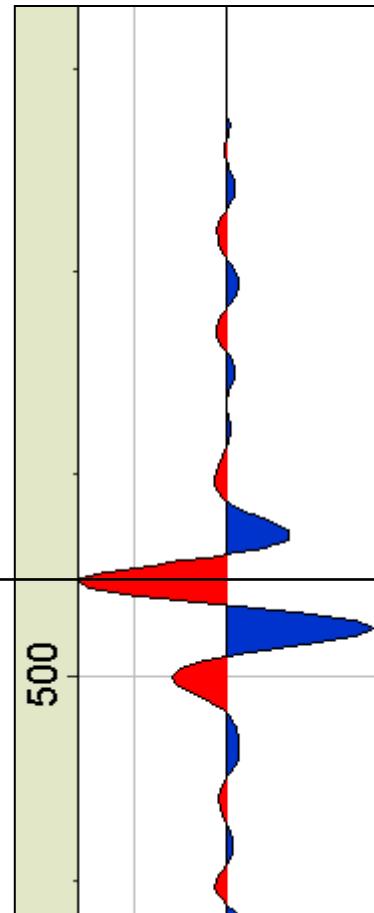

# Seismic Characterization Shallow Gas - Amplitude -

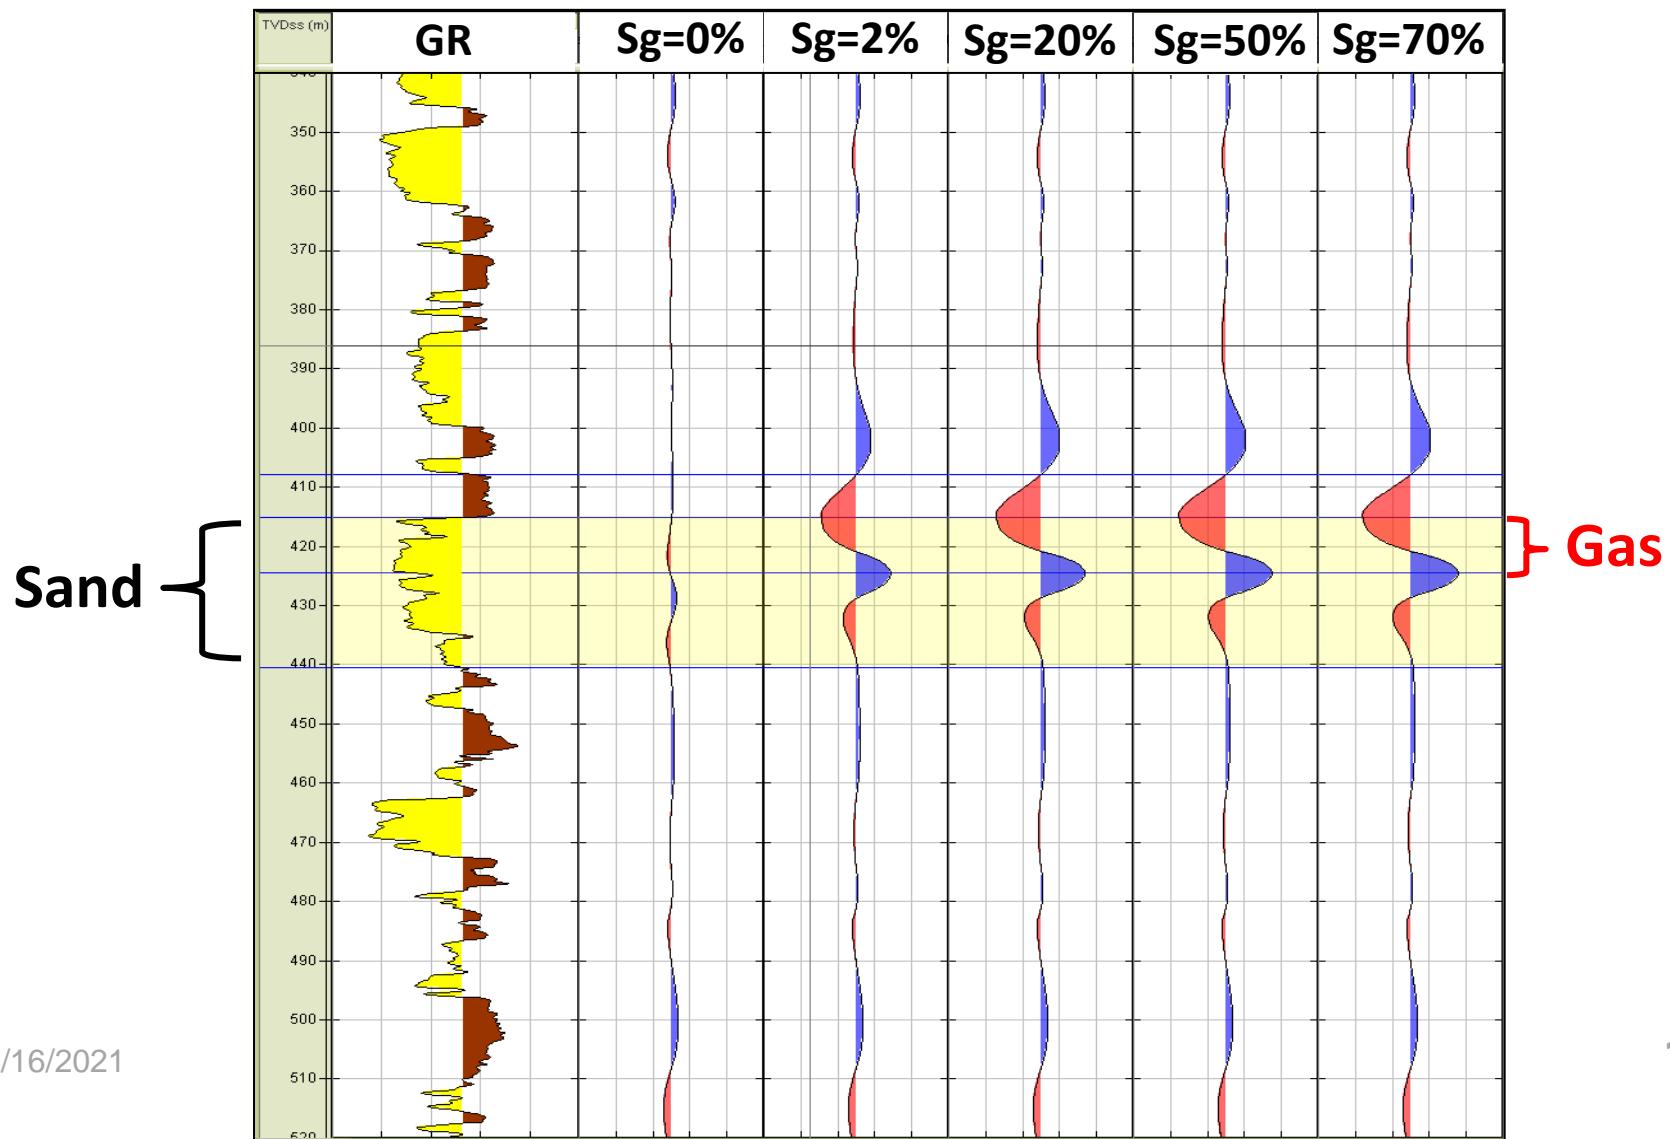

$Sg = 0 \%$

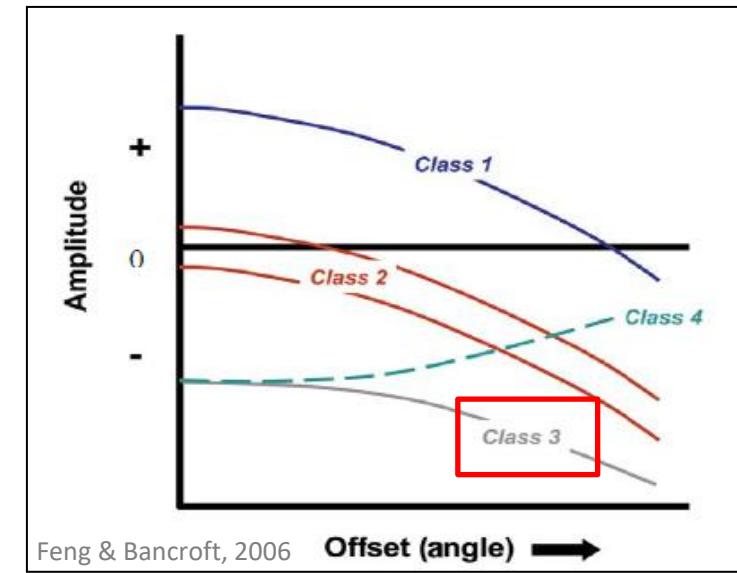

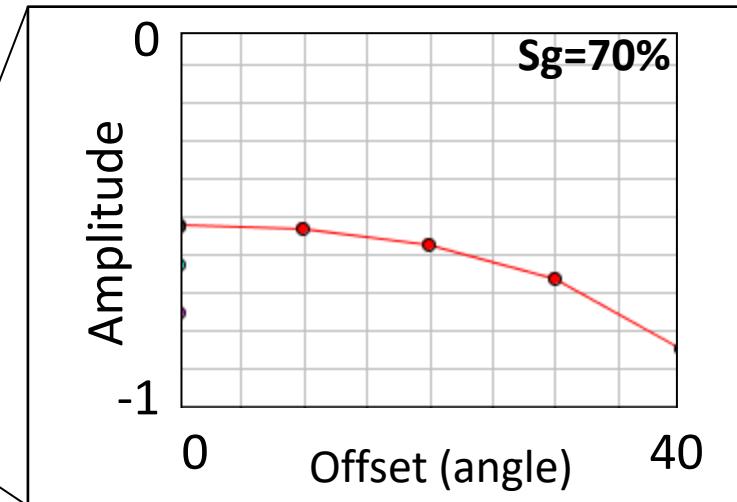

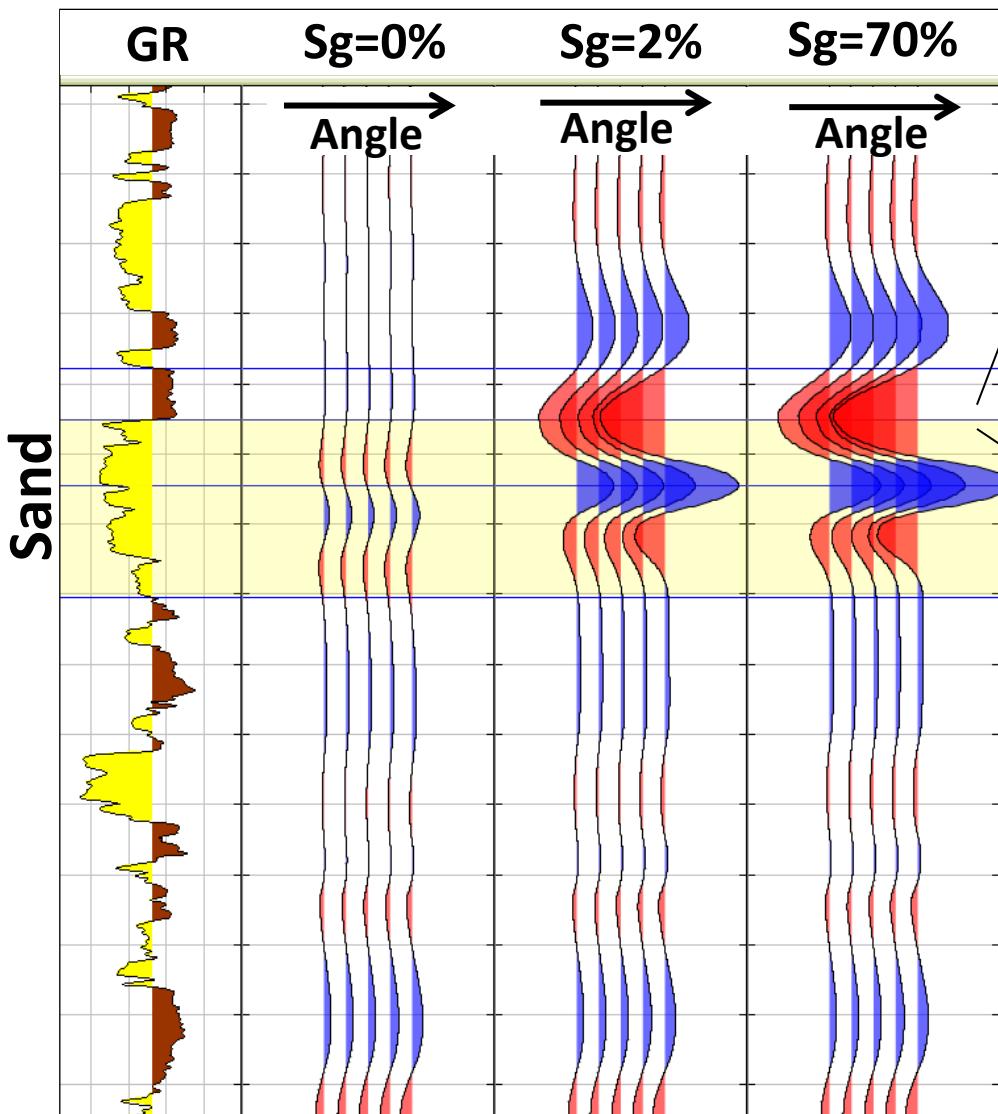

$Sg = 70 \%$

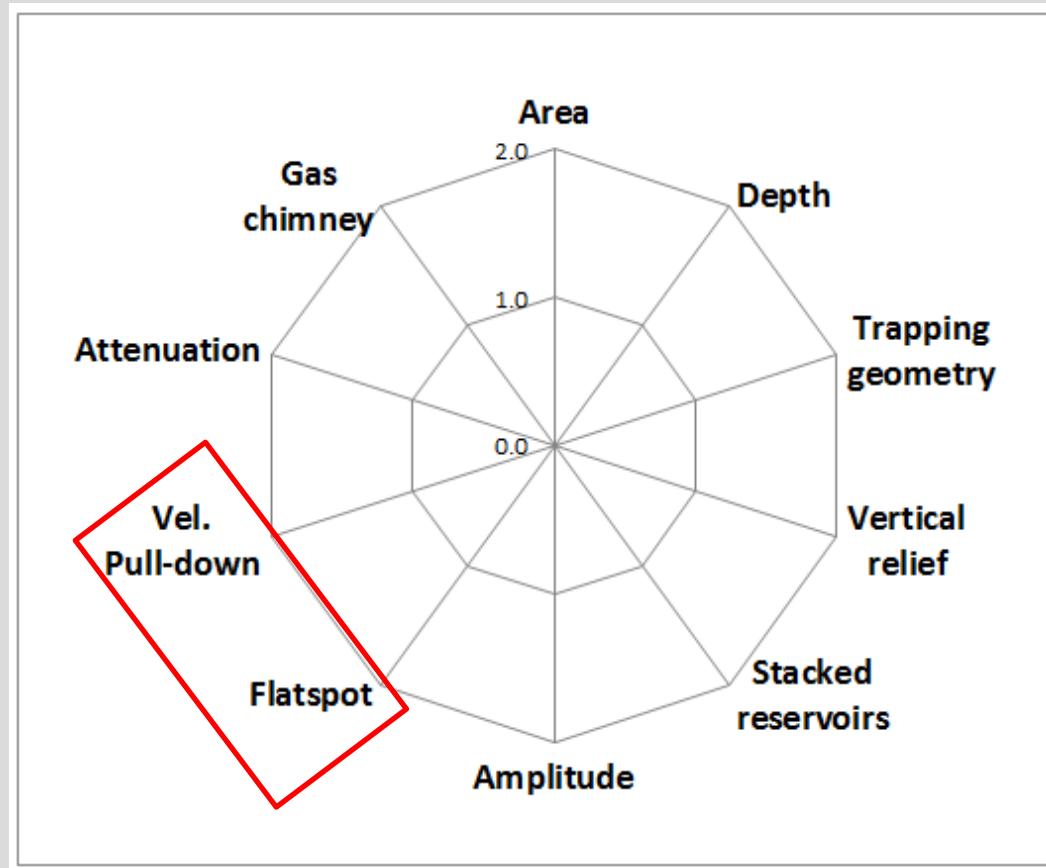

# Seismic Characterization Shallow Gas - Amplitude -

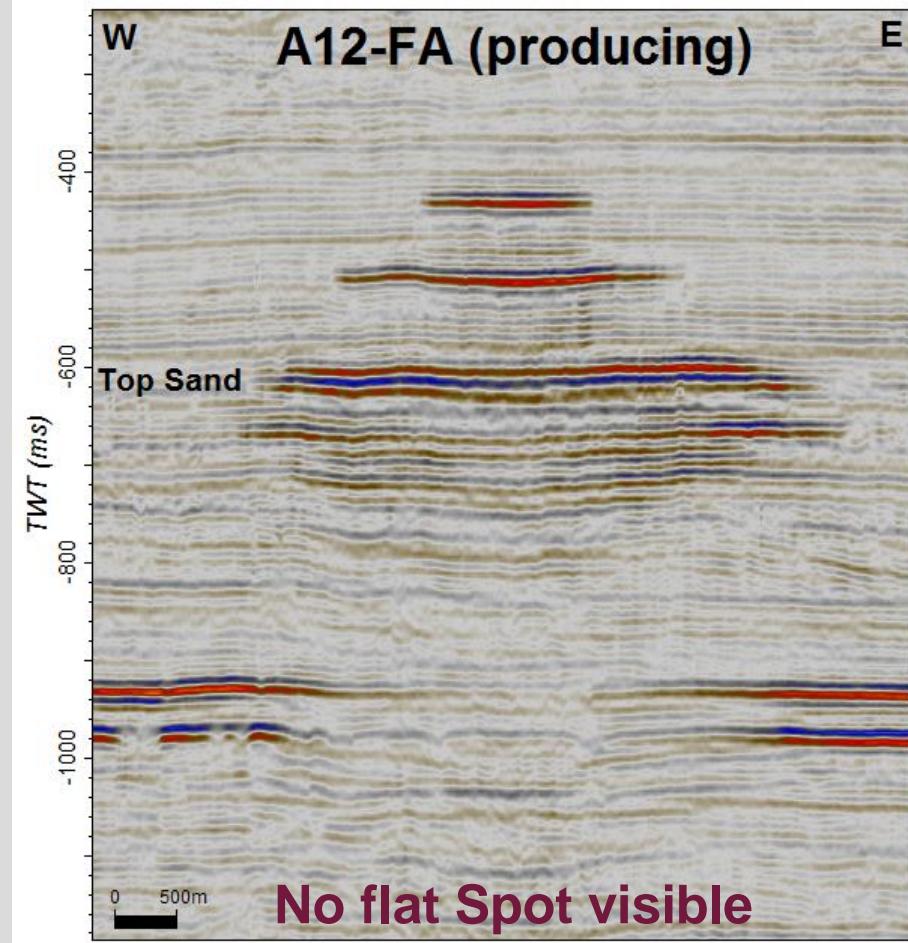

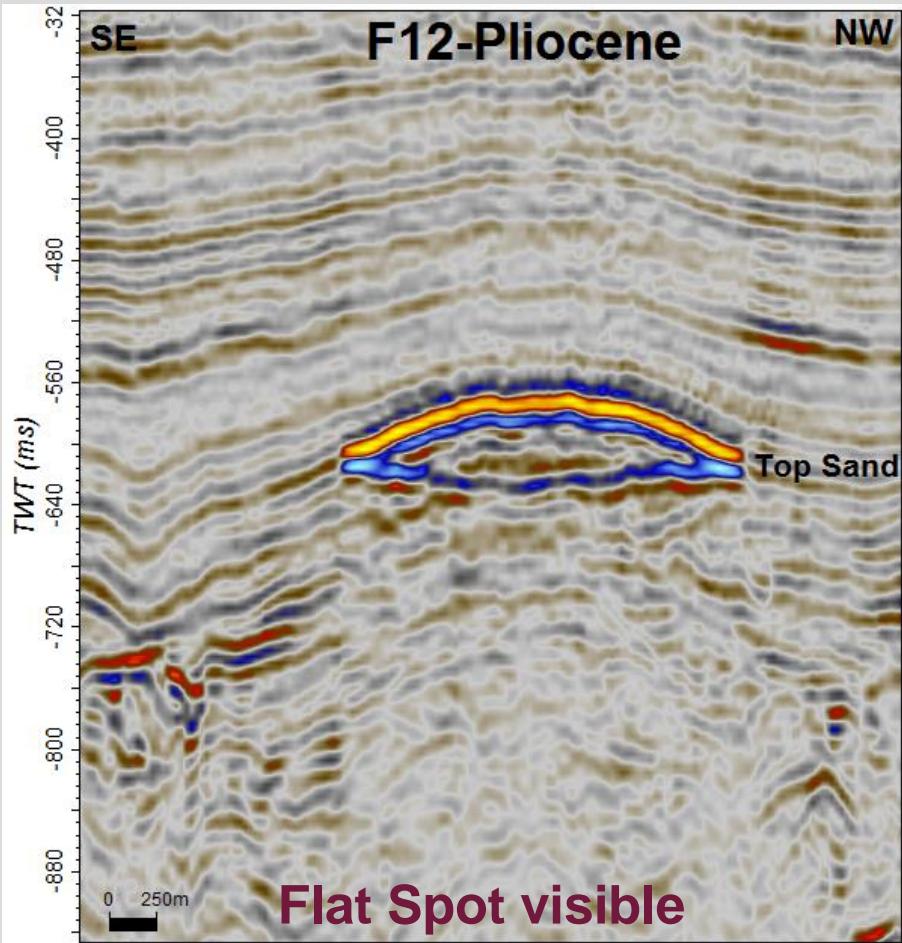

# Seismic Characterization Shallow Gas - Amplitude: Can AVO help? -

# Seismic Characterization Shallow Gas

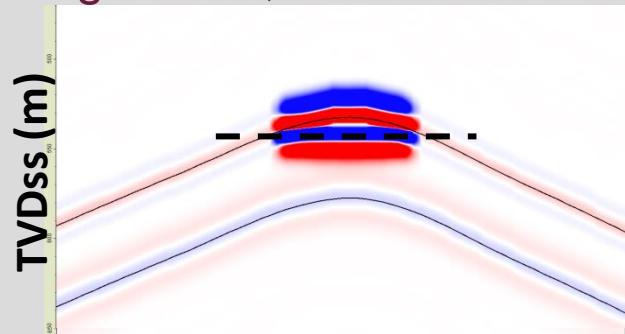

# Seismic Characterization Shallow Gas - Flat Spot -

# Seismic Characterization Shallow Gas - Flat Spot -

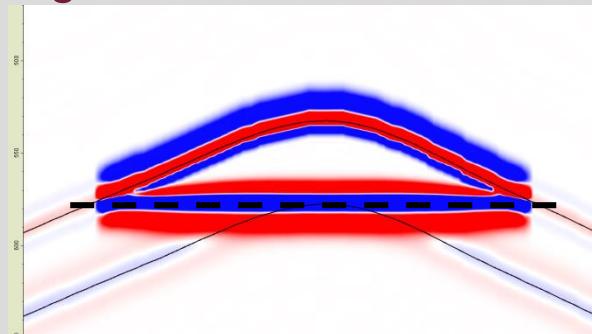

Reservoir = 50m

Sg = 60%, Column = 10m

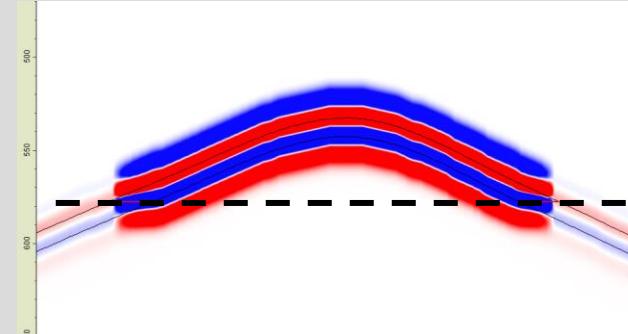

Reservoir = 50m

Sg = 60%, Column = 50m

Reservoir = 10m

Sg = 60%, Column = 50m

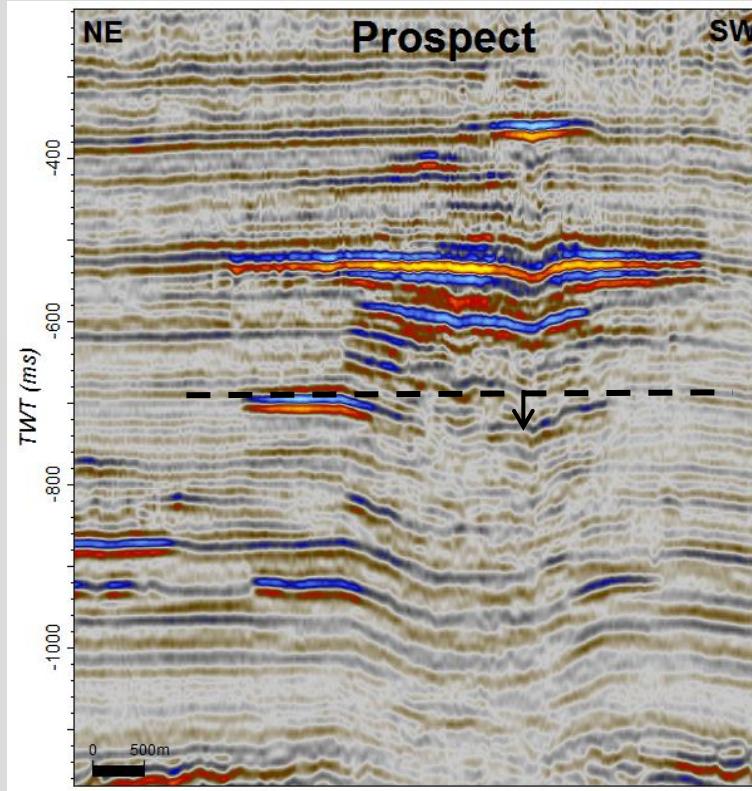

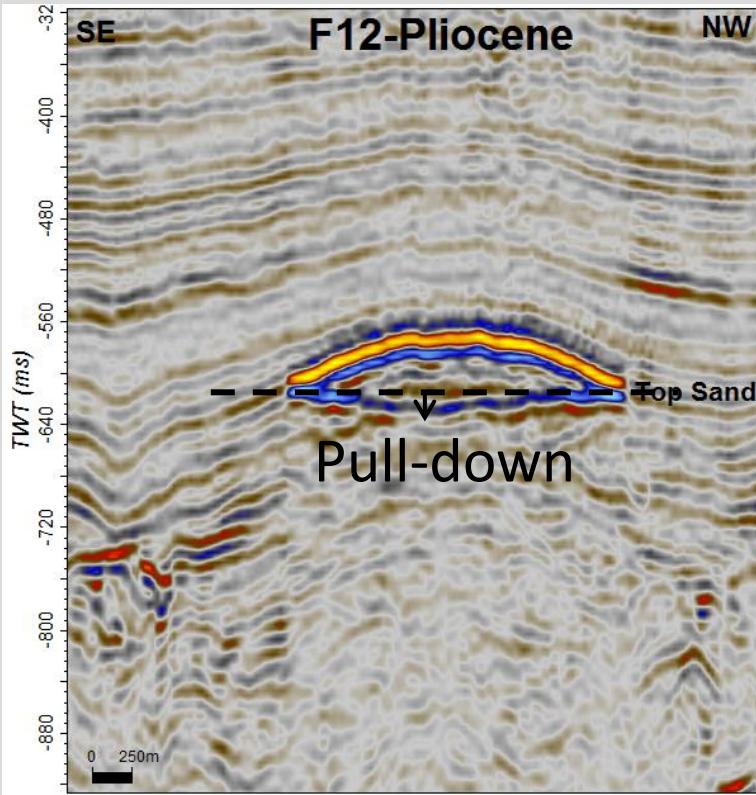

Visibility of flat spot dependent on:

- Vertical relief
- Reservoir thickness
- Column height

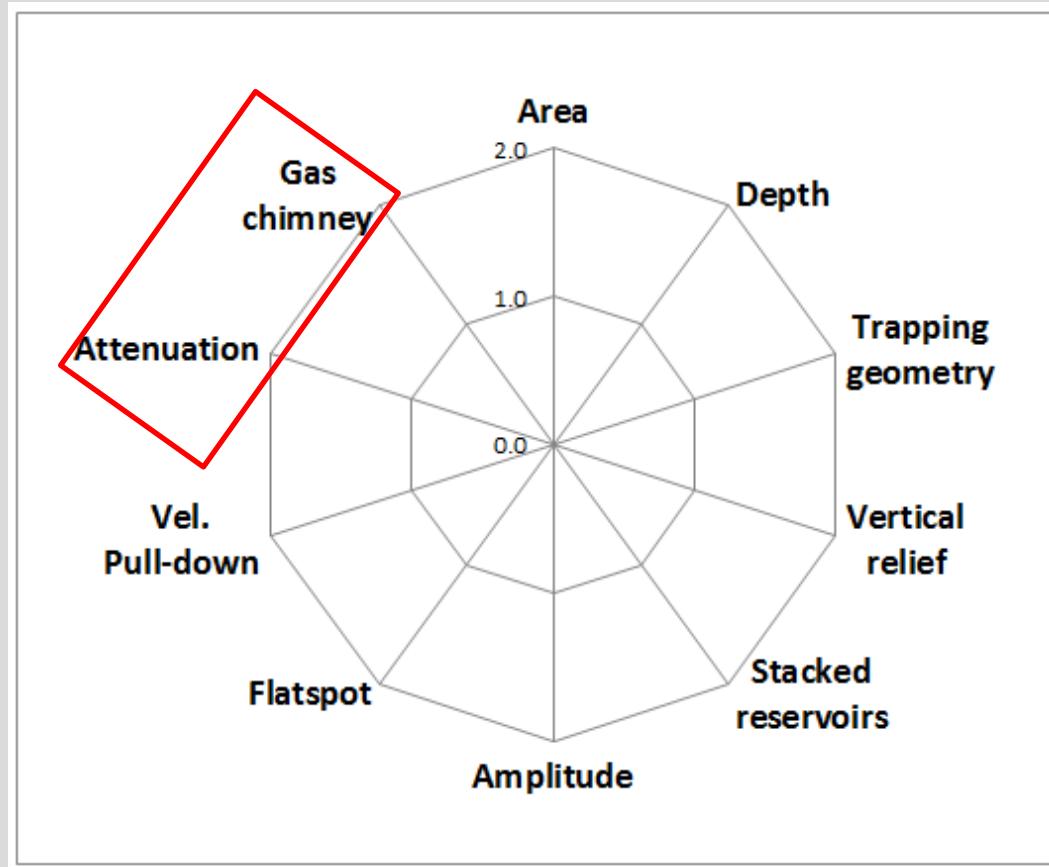

Flat spot indicates reservoir thickness & HC column, not saturation

# Seismic Characterization Shallow Gas - Velocity Pull Down -

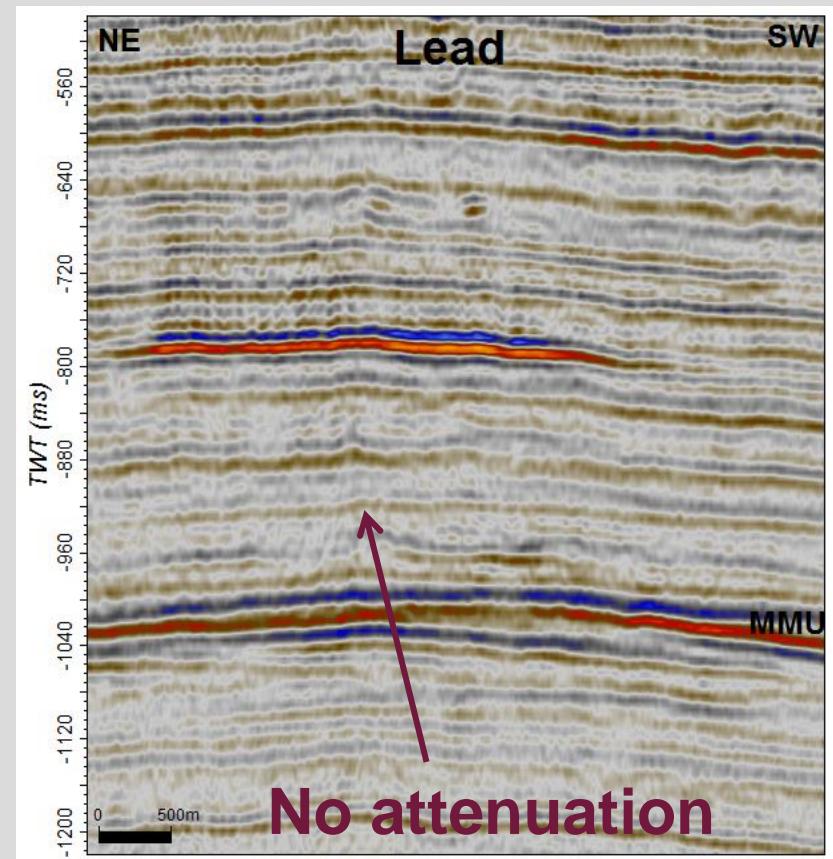

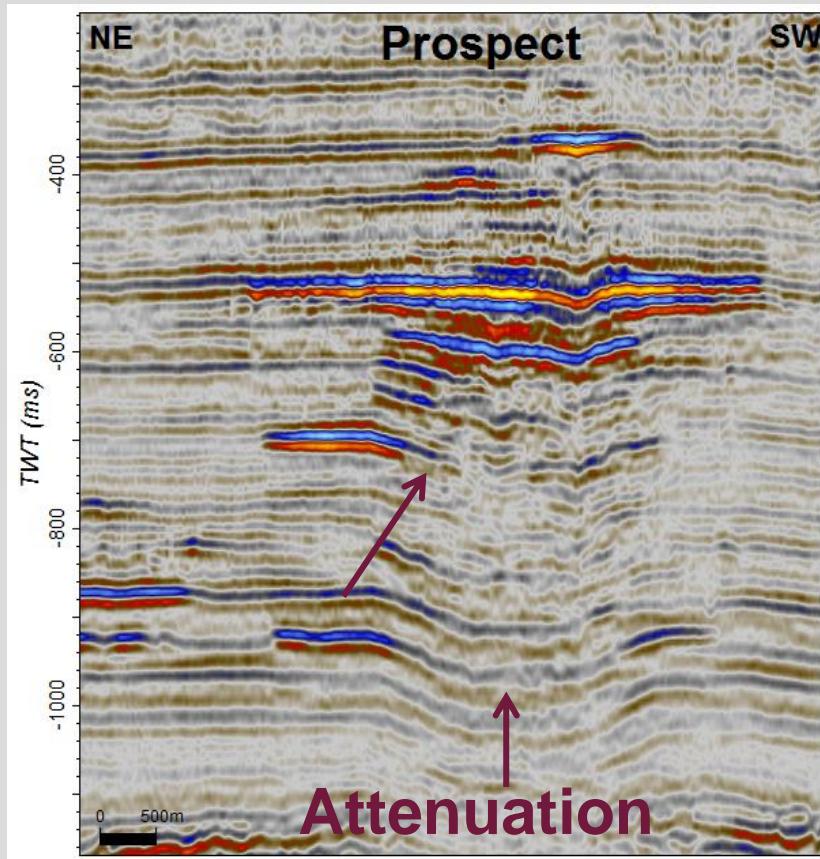

- Pull-down indicates (total) HC column, not saturation
- Absence pull-down indicates low saturation

# Seismic Characterization Shallow Gas

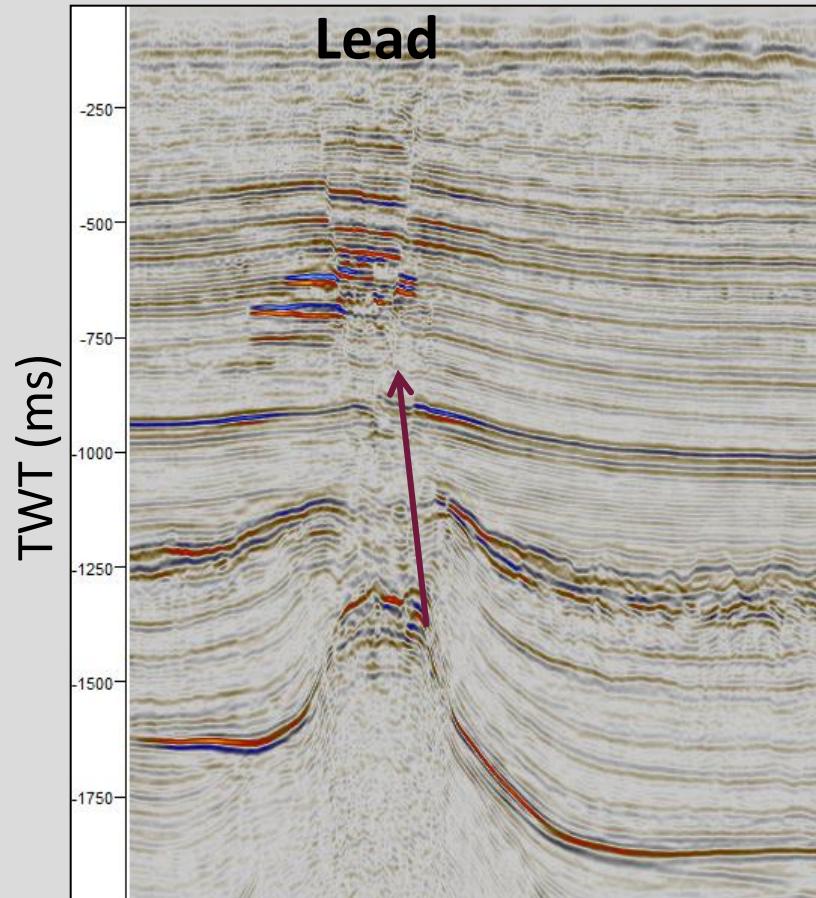

# Seismic Characterization Shallow Gas - Attenuation -

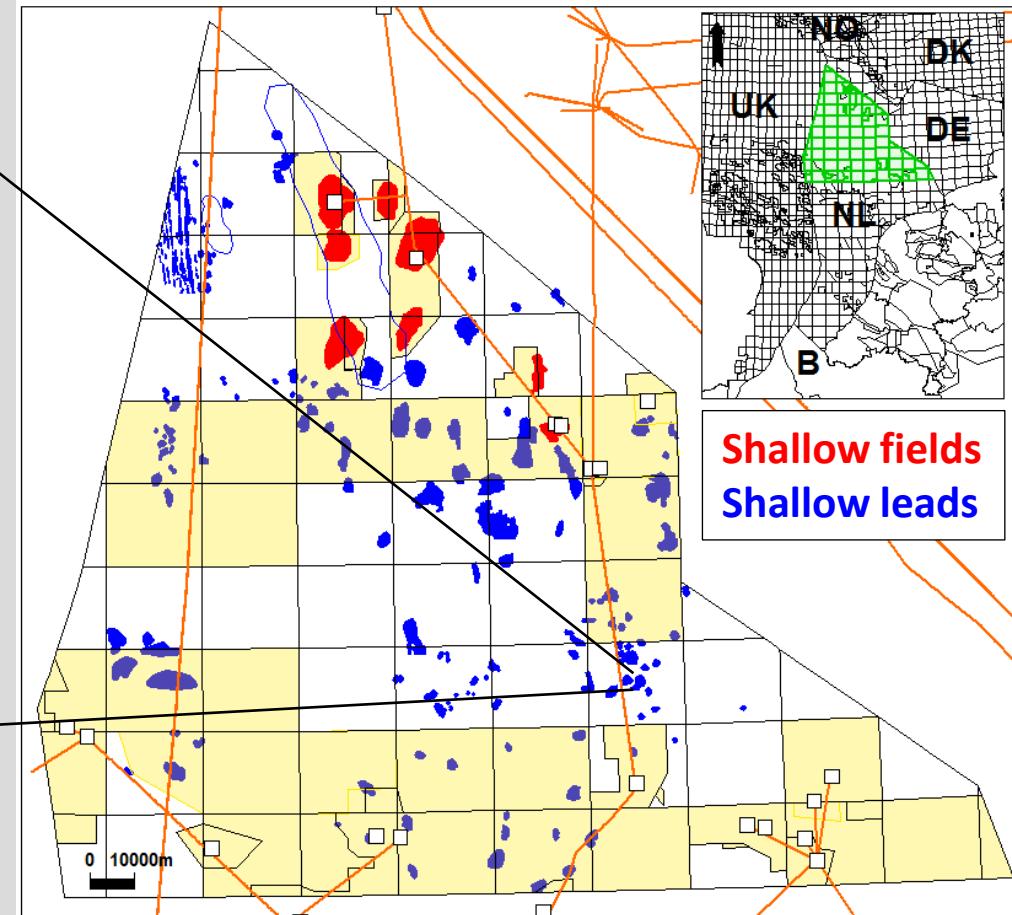

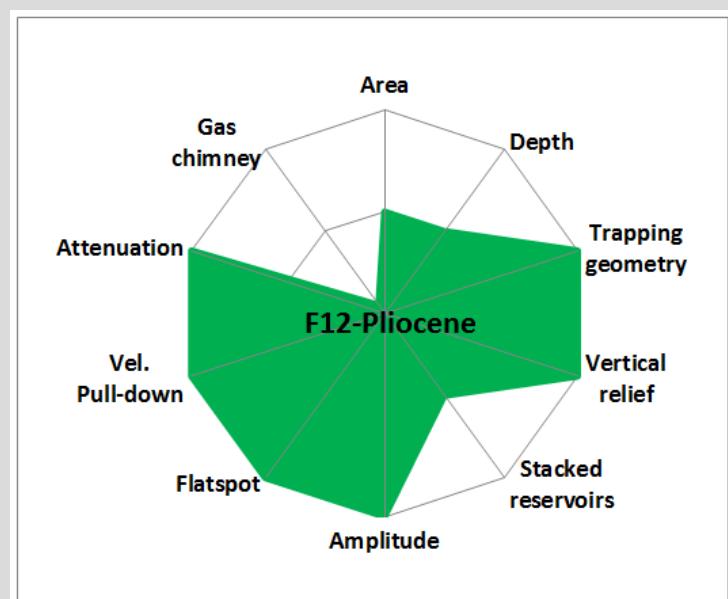

Absence attenuation indicates low saturation

# Seismic Characterization Shallow Gas - Gas Chimney -

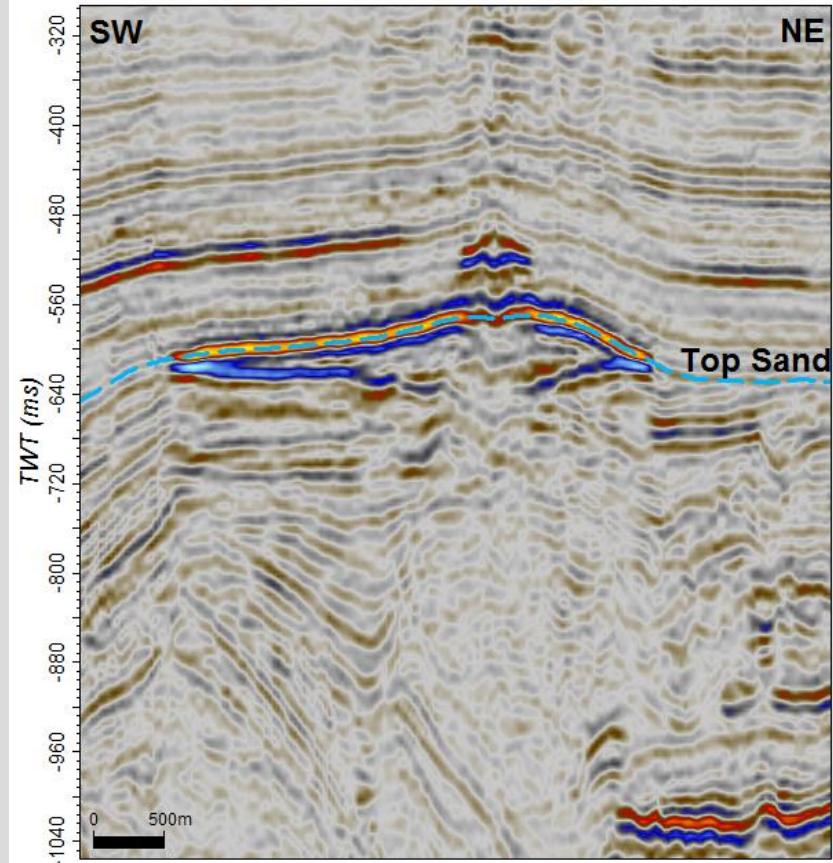

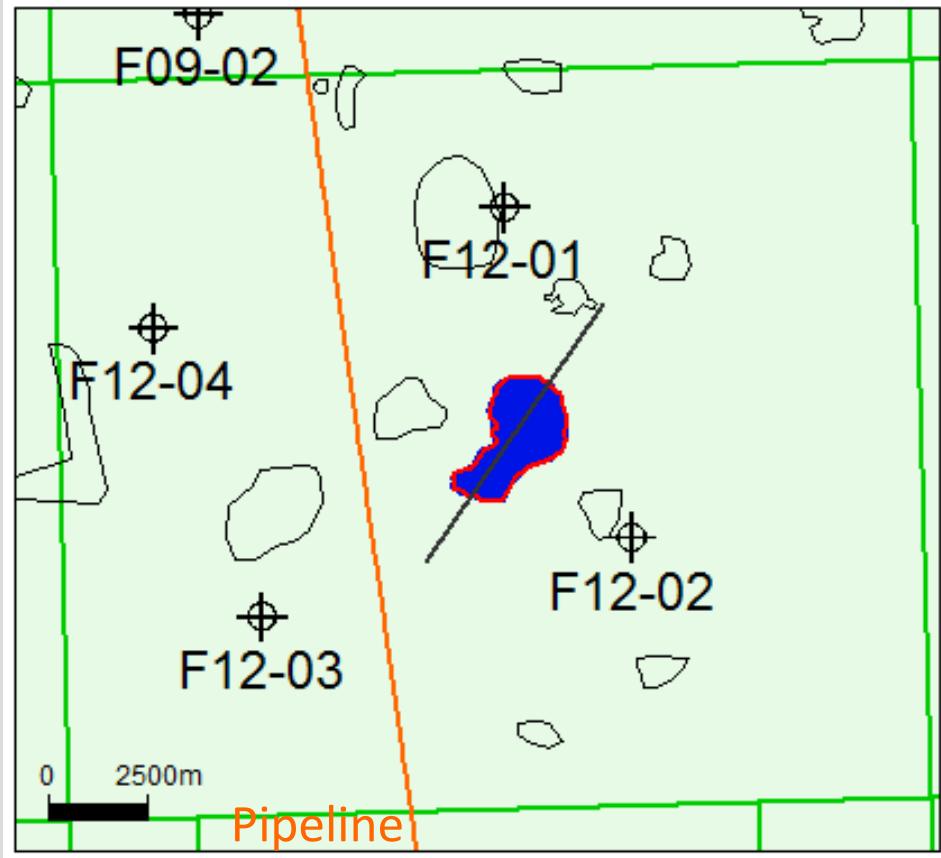

Gas chimney indicator for gas

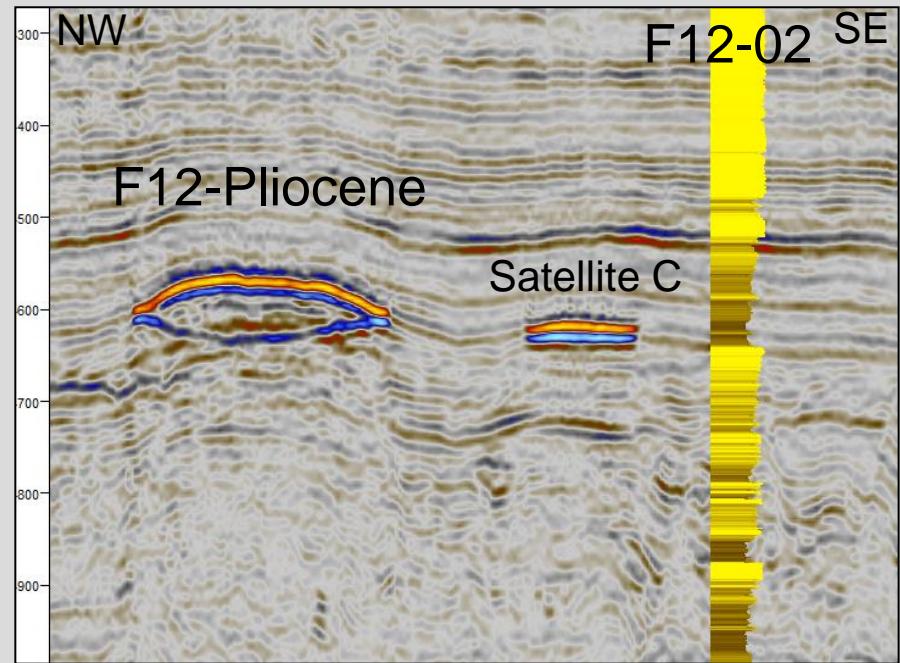

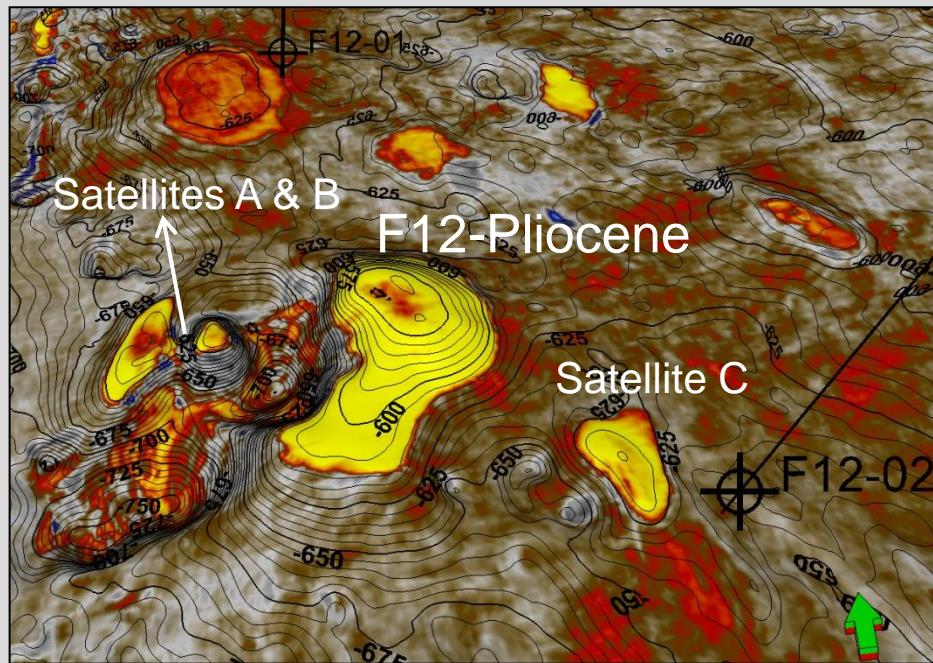

# Case Study: F12-Pliocene

# Shallow Gas Derisked by Seismic Characterization

- 8 fields (wells) & more than 150 leads (seismic data)
- Semi-quantitative seismic characterization useful for first order ranking
- Ultimate derisking required by the bit
- Find cost efficient solutions:
  - Relatively small leads
  - Distance to infrastructure
